

AirWash[®] plus

Automatic dip and rinse system

The perfect circle
for the conventional
way of milking!

The right product
The right amount
The right time

Available from **T H WHITE**
RIGHT NOW!

Working principle

Airwash Plus® is triggered by the ACR, or milk meter, at the end of milking. A measured amount of teat dip is dispensed through special valves into the short milk line in each liner. The dip coats the teat, it is not exposed to the environment prior to dipping.

As the cluster is removed, water and compressed air sanitises the liners intermittently in 30 seconds. The system only uses 300 ml. per cluster.

Installation of the Airwash Plus® system is easy and can be installed into any brand/type of milking parlour at any time.

features & benefits

- Affordable auto-dip and rinse system
- Fits on existing clusters, liners and shells
- Sanitisation of milking lines
- Reduction in milking time / labour savings
- Always the right amount of dip
- Cluster washes in normal park position
- Suitable for any type or brand of milking installation
